

- **Challenge:** <https://www.hackingwithswift.com/100/swiftui/19>
- **Project:** Unit Conversion
- **Language:** Swift
- **User Interface:** SwiftUI

UConvert is an app that lets users convert one unit to another.

- Type of units: Temperature, Length, Volume, and Time.

Theory Part: similar to WeSplit project

- Additional support: [How to convert units using Unit and Measurement - free Swift 5.4 example code and tips \(hackingwithswift.com\)](#)

Requirements:

- Users can select:
 - An input unit
 - An output unit
- Let users enter an input value
- Display the conversion output

Final product: My solely-designed app. (Please see the next page).
